WEB231 – Enterprise JavaScript I

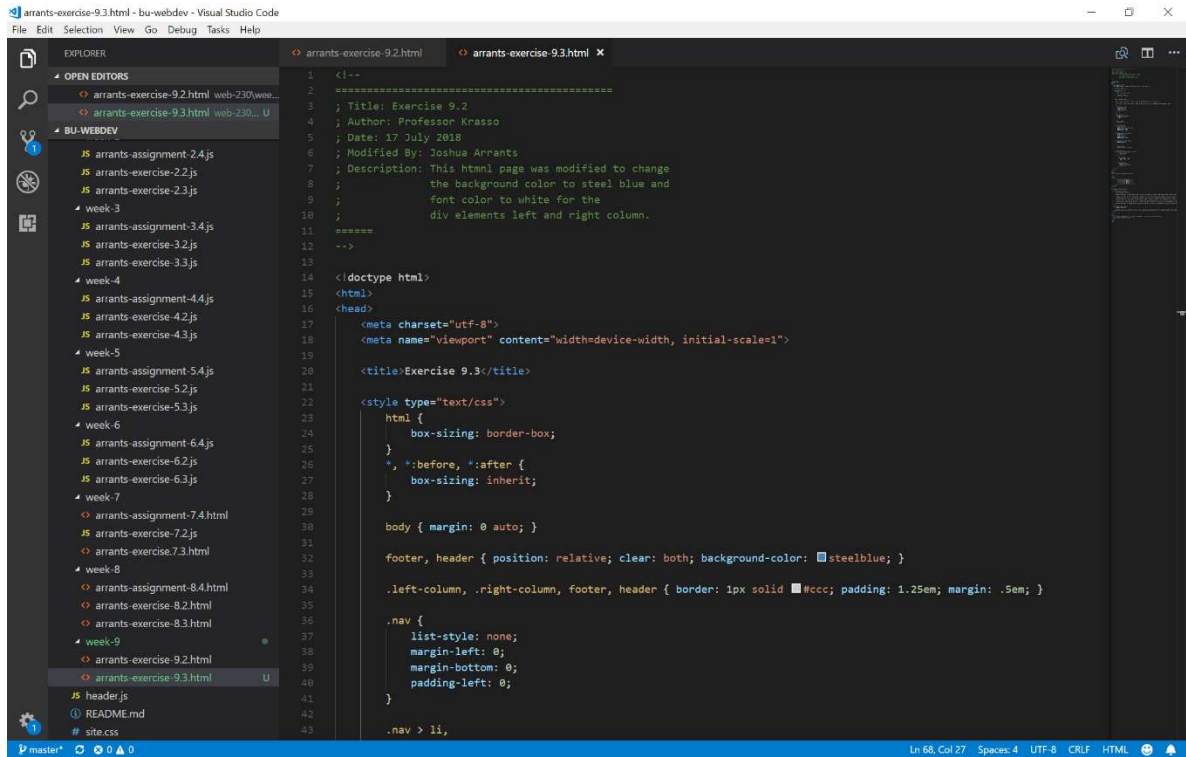

Exercise 9.3

Instructions on how to change the footer/header background color and header links font color:

1: Open a software application that allows you to edit html code.

Example:

2: Within the html code, find the css code for the **footer/header** and add **a** as a selector for the links in the header.

Example:

```
footer, header { position: relative; clear: both;}
```

```
a {}
```

3: Within the css code for the **footer/header** selector, apply the style to change the background color.

Example:

```
footer, header { position: relative; clear: both; background-color: steelblue; }
```

4: Within the css code for the **a** selector, apply the style to change the font color.

Example:

```
a { color: white; }
```

5: Save the file, and run the html page in a web browser.
